

Wireless and Wire-free Outdoor Surveillance

High quality, compact outdoor digital surveillance camera with inbuilt cellular modem & integrated solar panel

Simple "Set & Forget" operation

1. *Position* camera – no cabling
2. *Arm* camera – simply turn it on!
3. *Images are immediately sent* to your MyMi5 online account and to your email or mobile phone

Unmatched battery performance...

- The inbuilt solar panel continuously trickle charges the internal battery
- In circumstances where a large number of images are triggered, a small external solar panel can be added to ensure the RedEye Wireless remains charged

High quality security-grade images

- Inbuilt motion detector with programmable image sequence
- Images are time & date stamped with digital signature
- Privacy ensured – images can be digitally encrypted
- Telephoto lens options available
- Stores up to 200,000 images on removable storage, then optionally overwrites the oldest images

Modular options...

- **RedEye Wireless DayNight** incorporates an integrated night vision spotlight for short range night time image capture
- The addition of a **RedEye REMOTE NightVision** unit provides night time infrared illumination up to 20m from the camera
- The addition of a **RedEye REMOTE Trigger** enables triggering of the camera from up to 80m away
- Interface with alarms or other devices with internal expansion board

RedEye Wireless

2010-04-19 18:55:05, Time-Lapse - Camera 3

The world's first wireless and wire-free outdoor security camera

Patented low power design with integrated solar panel

Captures and sends security images securely through the cell phone network

Standalone - no cables or wiring

Compact design for covert monitoring

Half the cost ... twice the quality

plus **EXCLUSIVE** access to the **MyMi5 security portal**

A revolution in portable surveillance

The ultra low-power "Eye Series" cameras are the first to incorporate PSIS, a technique where a surveillance camera operates between CCTV & Digital Still Camera modes. This allows critical images of events (attacks, vandalism, thefts, and terrorism) to be captured and stored in high resolution without the usual degradation in quality of CCTV still images.
