

# Satellite or Cell Based Theft Detection

Lasso Technologies provides Satellite and Cellular based wireless communications technologies that can be used for theft detection.

## THEFT DETECTION AND TRACKING

- Any Motion causes Satellite or Cellular based devices to wake, determine position and report it.
- Place Lasso Device in item that you suspect might be stolen.
- Lasso will stay dormant and sleep while using minimal power but still detect motion.
- Continuous tracking and tracing when woken due to movement.
- Stays awake and reports position as long as motion continues.

- Report via email, Automated Voice Phone Call, and Map that a theft has occurred

**CELLULAR PROVIDER**  
Depending on location, Lasso uses AT&T, Telefonica, Vodaphone or T-Mobile linked to our internally developed cellular based technology to allow us to rapidly provide custom solutions.

**SATELLITE PROVIDER**  
Globalstar is the world's largest provider of mobile satellite voice and data services with 52 low earth orbit satellites and are affiliated with Loral, Qualcomm, Alcatel, Vodaphone, Hyundai and others.
